# FUTU-PYCONFFI

## 1. WHAT IS IT ?!

A python based tool for easier configuration management handling

Figure: 1 futu-py-conffi control flow dia

## 2. INSTALLATION AND CONFIGURATION

### 2.1. Prerequisites

The must have binaries are:  
bash, perl, zip, python3

The nice to have are:  
tmux, vim, ctags

The examples are for Ubuntu - use your OS package manager ...

```
apt-get autoclean
apt-get install --only-upgrade bash

sudo apt-get install -y perl,python

# optionally
sudo apt-get install -y excuberant-ctags
sudo apt-get install -y 7z

apt-get upgrade

python -V
# Python 2.7.12
```

## 2.2. Fetch the source

Fetch the source from git hub as follows:

```
# create your product dir:
mkdir -p /opt/futu/futu-pyconfi
cd /opt/futu/futu-pyconfi/
git clone https://github.com/futurice/futu-py-confi

mv -v /opt/futu/futu-py-confi /opt/futu/futu-py-confi.0.1.0.dev.$USER
```

## 2.3. Create you local conf file

The default conf file provides only limited functionality ( this is by design ) , thus copy and configure the configuration file for your host

```
# go to the product version dir
cd /opt/futu/futu-py-confi.0.1.0.dev.$USER

mv -v sfw/bash/futu-pyconfi/futu-pyconfi.set-your-host.conf \
sfw/bash/futu-pyconfi/futu-pyconfi.`hostname -s`.conf
```

## 2.4. run the tests

To run all the tests issue the following call

```
# go to the product version dir
cd /opt/futu/futu-py-confi.0.1.0.dev.$USER

bash sfw/bash/futu-py-confi/test-futu-py-confi.sh
```
